

Instruction for RFID Badges

After inserting the battery in the battery support inside face, then with the external button in place on the cylinder eVy

1

Show a first badge (with a different colour if it's possible) in front of the external button: specifics bips, **this first badge become your MASTER badge, which can be used only for programming or deleting your user permanent badges. Doesn't allow to activate eVy for (un)locking**

2

Wait few seconds, then swipe your Master badge and instantly, a new user badge : **2 longs bips, user badge is logged**

3

Repeat 2) for all the new users badges who have to be logged

4

Check that the badges are well programmed in 2 : when you pass them in front of the external button, they should activate eVy for locking. **A user badge is OK if it makes a long bip (cylinder activate), then 2 shorts bips (end of cylinder activation). Respect activation time (10/15 seconds) between each verification of the badges**

5

To clear an user badge, pass the Master badge, then instantly the badge who have to be deleted: **a long bip, 3 shorts: erased**

6

An erased badge or not logged badge ring 4 times

7

You can erase all the users badges in the same time on the mobile application (Access/ my badges/ clear child badges)
